iControlsView Overview

iControlsView® is a compliance intelligence suite that addresses your IT compliance needs to monitor, alert and investigate non-compliant areas. It provides unique ability to capture comprehensive log data, analyze the security events for risks through a sophisticated rules engine and presents a unified view with an executive dashboard and online reports. It also helps you to drive performance success by representing compliance issues through meaningful visuals in a consolidated view.

Components:

- Analysis: Data analysis and assessment
 - Data capture
 - Event analysis and risk assessment
- Reporting: Dashboard, reporting, alerts and follow up
- Both the components are independent while they are integrated through application parameters

Flexibility:

- Most features are customizable
- Any activity log can be added through metadata manager
- Rules can be added / modified through GUI screens
- The charts can be customized with choice of 30+ animated graphical charts
